DETAILED ACTION

Election/Restrictions

This application contains claims directed to the following patentably distinct species of the claimed invention:

- 1) a method wherein the etalon step transition is reduced by etching;
- 2) a method wherein the etalon step transition is reduced by applying a coating;
- 3) a method wherein the etalon step transition is reduced by annealing;
- 4) a method wherein the affect of abrupt step transitions is offset by doping the transition regions.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claim 11 is generic.

Furthermore, specie of group 1 (etching) contains claims directed to the following patentably distinct subspecies:

- 1a) "abrasive etching" (without an erodible mask);
- 1b) erodible masking process.

Should Applicant elect the group 1 specie above then Applicant is additionally required under 35 U.S.C. 121 to elect a single disclosed subspecies for prosecution on the merits to which the group 1 specie shall be restricted if no claim, generic to the specie of group 1, is finally held to be allowable. Currently, claims 12 and 18 are generic to the specie of group1.

Applicant is advised that a reply to this requirement must include an identification of the specie (and, if applicable, the sub-specie) that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims

subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

At the time of filing, Applicant submitted remarks positing the generic nature of claim 18. As this view of the claims differs from that of the examiner's, a telephone call was not made to request an oral election to the above restriction requirement because the examiner thought it would be best to explicitly state on the record, his understanding of the claims as interpreted view of the specification.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
